LeNoMore

LeNoMore is used mainly to disinfect and prevent mold growth. It can be applied diluted to the body if any type of infection has occurred. If the infection is caused by a fungus (rather than a bacteria) it is probably best to dilute with water rather than with a vegetable protein based carrier oil. A fungus can feed on vegetable protein carrier oils such as almond, olive, or grapeseed. This blend is effective against such nasties as athlete's foot and toe nail fungus.
