LeSimplicity

LeSimplicity is a blend of potent antiviral oils which target the HSV-1 and 2 (Herpes Simplex) viruses. HSV infection causes fluid-filled blisters which form in clusters and then spread. Fatigue, irritability, low-grade fever, slow healing of cuts, infections are other signs of infection. This blend is designed to kill the viruses at the areas of outbreak, then follow the same neural pathways that the virus traveled until it reaches the colonies in the nerve bundles to kill it at the source.
