Benzoin

Benzoin is useful for persons who feel unloved (or undeserving of love), even when surrounded by family and friends who love them deeply. Benzoin creates soft, warm, fuzzy feelings in the heart. It is like coming home at last from far away. Benzoin has a pronounced effect on congestion, literally "melting away" blockages in the lungs, lymphatic vessels, and intestines. Benzoin is thick and viscous and is often used as a fixative to stabilize the aroma of oils and perfumes made from more volatile ingredients.
